Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1866 Excerpt: . and after such transit will be respectively and thus, contrary to what usually happens, there will, on the above hypothesis, be an extra gain of two double permanences. 14. Theorem No. 2 may also be stated as follows: If $C + C_JX + C$, $Ca + . + CHX = /x$, and v be any real quantity not intermediate between 0 and $-w$, and if c , 1.2 1.2.3 $C v C v(v+l) (v + 3) C$ say a_0 , a , o . be taken as the simple elements of $/ (a;)$, and a , $a? - a_0at$, $a - aflt$, a 1-axsan, $a/$, as the quadratic elements of the same; and if we understand by the (cA) association the paired series $co cu csJ Cn A A-Art AJ$ and if $pP(X)$ signifies the number of double permanences in the (cA) association, corresponding to $f(x+ X)$, then $pP(p)-pP() = p,) + 2k$, where k is zero or some positive integer, f_i being supposed greater than X . It is easily seen from this that also $vP)-vP(ft) = (/ , X) + 2\#$; and this gives us a second general theorem, and these two theorems will give different limits of $(/ , X)$ unless $k = k$, i.e. unless $P(p) = P(X)$, for $P(p)-P(X) = 2 (k-k)$. We may observe that there is nothing corresponding to this in Fourier's theorem, since $p (p)--p (X)$ and $v(X)--v (p)$ give the same limits. 15. The existence of a theorem No. 3, including No. 2, and containing two arbitrary parameters,...
