RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 42 pages. Original publisher: Seattle, Wash. : U. S. Dept. of Commerce, National Oceanic and Atmospheric Administration, National Marine Fisheries Service, Alaska Fisheries Science Center, 1998 OCLC Number: (OCoLC)575326846 Subject: Atka mackerel -- Alaska -- Geographical distribution. Excerpt: . . . fisheries in the 1990s because, as will be shown, the two fleets fished in slightly different regions. Hauls in which Atka mackerel was targeted were identified in the observer database using the species composition of the catch samples and a series of hierarchical target definitions ( J. Berger, NMFS, Alaska Fisheries Science Center, 7600 Sand Point Way, NE, Seattle, WA 98115. Personal commun. , March 1992 ). Atka mackerel was assumed to be a target species if it made Hauls in which other species comprised up at least 20 of the retained groundfish by weight. between 20 and 95 of the retained groundfish were removed from consideration prior to assigning an Atka mackerel target to those satisfying the above criterion. Depth, location and date of the Atka mackerel fishery hauls were utilized to analyze seasonal and depth distributions of the exploited populations by area ( Table 1 ). Observers typically measured up to 150 specimens of Atka mackerel each day that the vessel fished. The length-frequency sample from any one haul was randomly selected and reflects both the length and sex composition of the entire haul. Only data from sampled hauls in which more than 30 fish were measured, and no more than 1 fish was unsexed, were further aggregated by month and area for analysis of seasonal length frequency and sex composition of Atka mackerel fishery hauls ( Table 2 ). RESULTS Haul Location and Depth Within two areas exploited by the fishery ( Seguam Pass...
